[Table 1st below at top October 21, 2025, amplifies / exacerbates Gains of Past 6 Months – since a nadir was reached in April of 2025, with ECO tracker since Up near 130%. Following that a 2nd Chart pulling back to Past 12 months shows how was amplified in October 2025. Then a 3rd Chart also shows a relatively strongly lagging performance of ECO -- vs. S&P500. We emphasize as always that ECO theme is highly volatile: it can & does fall hard, drops more so than broader markets. So this brief gain near 130% in 1st Table, is ephemeral].
