12 'Bounceback' Stocks Put Up Huge Gains After Skidding In 2024

What doesn't kill your ETF apparently makes it stronger. Twelve actively traded ETFs, including ... Invesco WilderHill Clean Energy, are bouncing back with a vengeance this year. All of these ETFs returned 20% or more this year after dropping 20% or more in 2024, says an ... analysis of data from

Such bounceback funds are sorely needed as the AI rally in some of the megacap tech giants wanes in recent weeks. This year, ... That handily tops the S&P 500.

But growth is coming from some ETFs that were more of an anchor holding growth back last year.

"Past performance is not indicative of future results' is particularly true with index-based ETFs," said "Since the goal of these funds is to replicate the performance of a representative index, investment styles often move in and out of favor from one year to the next."

....

Clean Energy ETF Comes Back

Many of the fears clean energy investors had about the Trump administration's attitude toward the sector haven't panned out. The viability of clean energy is superseding any bias the White House might have.

Invesco WilderHill Clean Energy is a dramatic example. It returned nearly 67% this year so far after being down 31% in 2024. And it's not alone.

It, too, is a broadening of the AI theme. "A key driver has been the massive energy consumption from new data centers required to support the AI boom, for which solar energy has emerged as a scalable and near-term solution," "Additionally, the expiration of tax credits for residential solar installations may have prompted a surge in activity."
