Is This the Right Time to Bet on Clean Energy ETFs?

Even as President Trump scales back clean energy backing, investments in clean energy remain attractive to funds due to soaring AI-driven electricity demand and falling renewable costs.

According to ... , in addition to Trump's cuts to clean energy funding, accelerated expiry of tax credits and slowed permitting dimming growth expectations, the International Energy Agency (IEA) last month lowered its 2025–30 forecasts for U.S. wind and solar growth by nearly 60% and 40%, respectively.

However, investment funds remain active in U.S. renewables, encouraged by strong market fundamentals and the growing need to modernize the nation's power grid.

Wall Street Sees Opportunity in Clean Energy

According to ... , even with policy uncertainty, U.S. demand for renewables remains strong, fueled by rapid growth in AI and digital infrastructure, as quoted in the abovementioned

ETFs in Focus

With expectations for continued growth, investing in clean energy ETFs is becoming increasingly attractive. Below, we highlight a few ETFs for investors to increase their exposure to clean energy.

....
